

CAN HIGH BEAM RELAY

(ON/OFF)
(ON/OFF/ON*)

WWW.DIGITALSWITCHING.COM.AU

OVERVIEW:

The DSSA CAN 12V Relay is a custom designed and programmed device allowing vehicles to connect driving lights where the High Beam signal appears only on the CANbus and not on a traditional wire. The unit has been custom configured to allow two unique switching solutions - ON/OFF and ON/OFF/ON.

Details for the two installation methods are as follows:

ON/OFF

- If the switch is ON, Spot Lights will be ON with High Beam
- If the switch is OFF, Spot Lights will be OFF with High Beam

ON/OFF/ON*

- If the switch is ON (Pos #1), Spot Lights will be ON with High Beam
- If the switch is OFF (Pos #2), Spot Lights will be OFF with High Beam
- If the switch is ON (Pos #3), Spot Lights will be ON independent of High Beam

*Please Note: This connection does not meet ADR design regulations.
